Scrum-Agile Team Roles

- Product Owner – Prioritizes requirements and manages the product backlog.
- Scrum Master – Facilitates communication and removes obstacles.
- Developer – Implements features and delivers working functionality.
- Tester – Verifies requirements and ensures software quality.

Agile Phases of the SDLC

- Requirements – User stories are gathered and prioritized in the product backlog.
- Sprint Planning – The team selects and estimates work for the sprint.
- Development – Features are designed, coded, and integrated.
- Testing – Functionality is verified throughout the sprint.
- Sprint Review & Retrospective – Completed work is reviewed and improvements are identified.

Waterfall vs. Agile Development

Waterfall

- Sequential development process
- Requirements defined at project start
- Limited customer feedback during development
- Changes can be costly and time-consuming
- Testing occurs near project completion

Agile

- Iterative development in sprints
- Requirements can evolve throughout the project
- Frequent stakeholder feedback
- Adapts quickly to changing requirements
- Testing occurs continuously during development

During the SNHU Travel project, the wellness-travel requirements were added after development began. Agile allowed these changes to be incorporated into subsequent iterations with minimal disruption, while a Waterfall approach would likely have required revisiting earlier project phases and delaying implementation.

Why Agile Was the Best Choice for the SNHU Travel Project

Advantages

- Adapted quickly to changing requirements
- Encouraged stakeholder feedback
- Supported continuous testing and improvement
- Delivered value incrementally

Challenges

- Required ongoing communication
- Needed active stakeholder participation
- Frequent backlog reprioritization

Conclusion

Agile was the most appropriate approach for the SNHU Travel project because its iterative structure accommodated evolving requirements, supported stakeholder feedback, and allowed continuous testing throughout development.
